1 Overview

Advanced Photonic Sciences' now provides a collection of high-power fiber-coupled Blue (445nm) laser modules. This datasheet contains information on the 150W power device.

Applications

- 1. Material Processing
- 2. 3D Printing

Features

- 1. 445nm Wavelength
- 2. 150W Output Power
- 3. 105µm Fiber Core Diameter
- 4. 0.22 Numerical Aperture (NA)
- 5. Internally Water Cooled

Not Included: Thermoelectric Water Chiller, Power Supply

*For plug-and-play applications, please explore our Integrated Laser System (ILS) product line.

(1) Data measured under operation output at 150W @ 20°C.

(2) A non-condensing environment is required for operation and storage.

(3) Operating temperature defined by the thermistor. Acceptable operating range is 15°C~30°C,but performance may vary.

(4) Product delivery qualification standards: Current beginning of life \leq 3.5A, Power beginning of life \geq 150W;

(5) Within the warranty period, the product is considered qualified with Lend of Life = 3.5A, Pend of Life $\leq 120W$.

3 Operating Notes

- 1. Avoid eye and skin exposure to direct radiation during operation.
- 2. ESD precautions must be taken during storage, transportation and operation.
- 3. Short-circuit is required between pins during storage and transportation.
- 4. Please connect pins to wires by solder instead of using socket when operation current is higher than 6A. Soldering point should be close to the root of the pins. Soldering temperature should be lower than 260°C and time shorter than 10 second.
- 5. Make sure the fiber output end is properly cleaned before operation of laser. Follow safety protocols to avoid injury when handling and cutting the fiber.
- 6. Use constant current power supply to avoid surge current during operation.
- 7. Laser diode must be used according to the specifications.
- 8. Laser diode must operate with adequate cooling (5L/min)
- 9. Operation temperature ranges from 15°C to 30°C.
- 10. Storage temperature ranges from -20° C to $+70^{\circ}$ C.
